

12 Methods Boost Grades, Test Scores, Teacher Retention

“Our students, institutions and teachers are in a tough crisis mode right now. We urgently need a revolution in learning styles and methods,” says International Educator and Glendale College Professor Alfred Porter.

Students are not refusing “to be all that they can be nor are they trying not to go the extra mile,” says Professor Porter who is a senior accelerated learning trainer. “Students and teachers have not been introduced to methods like Beyond Accelerated Learning which features some of the most effective learning systems today.” He has taught at UCLA, Pepperdine University, the University of Puerto Rico, Long Beach City College and the Los Angeles Community College District.

Professor Porter, who was hired by Ohio University to go to Saudi Arabia as an educational consultant, encourages students, educators and parents to consider the following methods and practices. He has also traveled, studied or taught in the Middle East, Far East and Europe.

1. Accelerated learning practices
2. Group Learning Strategies
3. Mind Mapping
4. Aromatherapy
5. Hypnotherapy
6. Subliminal Learning
7. Speed Reading, Rapid Reading
8. Note-taking
9. Learn New Memory Techniques
10. Silva Mind Control
11. Music in Learning
12. “Beyond Accelerated Learning” www.beyondacceleratedlearning.com

According to Professor Porter, these methods will help students learn faster, and perform much better on school exams, and most Standardized Tests in a very short time. “They will also help greatly with teacher retention,” he notes. However, he implores students, educators and parents to take a closer look at Beyond Accelerated Learning, “a highly effective ‘wholistic’ method to learning and study skills. It is the ultimate approach in achieving goals, outshining competitors, defusing negative energy and stress.”

He says that the difference between Beyond Accelerated Learning and other learning systems is that it guarantees to solve all student difficulties and challenges in learning and studying “as long as the student comes with an open mind and has a willingness to learn.”

He says that “this method promises to be a student’s optimum learning experience.” For further information about Beyond Accelerated Learning go to www.beyondacceleratedlearning.com
