

NEW USE FOR PILLOWS, KEEPING HANDS WARM?

Just when you thought that pillows were only good for sleeping a new use has been found. A pillow case has been invented to help keep your hands warm.

We all know that pillows can be used for other things besides sleeping. For example some like to hug a pillow while they watch their favorite movie. Some take them to a ball game to cuddle on a chilly night. If you're like me you hug yours as you sleep at night. So what else can a pillow do? How about keeping your hands warm?

From the inventors of the "EZ Blanket", a new pillow case for pillows has been created, the "EZ Pillow Case". What makes this pillow case different? The pillow case comes with a sewn on pouch that is used to keep the hands of the user warm when they hug the pillow. The pouch is big enough to slip in both hands in while hugging the pillow. The pillow case comes in a universal size so it fits most pillows.

Now users can use the pillow to watch their favorite movie, at their favorite ball game, or while they sleep and keep their hands warm. It can used by people of all ages and available in different colors.

To see these pillow cases visit www.ezblanketstore.com We welcome your comments and suggestions. A new company created by 3 high school friends that have now known each other for over 30 years we are also looking for any new ideas, so drop us a line and share yours. The next "big thing" may be your idea!
